Grydale unveils mobile dust collect system to keep the air clean on job sites at CONEXPO – CON/AGG 2023

RDO Equipment Co. and subsidiaries are now the Grydale dealer for North America for their patented dust collection systems. Rental and sale options are available.

Grydale Industrial Mobile Dust Collectors, first-time exhibitors at ConExpo 2023, highlights its internationally patented JMS-30-MDT track-mounted dust collectors. Experience this system in-person March 14-18 at booth N10006 in the North Hall of the Las Vegas Convention Center.

CEO and innovator Andrew Fanning and his team from Australia will be available to discuss the wide range of applications where mobile dust collectors can be used to provide effective dust control. Fanning and his team will touch on ways to manage the health and safety of workers while achieving operational efficiencies within tunnelling, mining, excavation, blasting, bulk storage handling, construction, demolition and recycling.

The Grydale team will be joined by its North American dealer, RDO Equipment Co. RDO brings more than 50 years of equipment industry experience into the partnership which stands to strengthen Grydale's international expansion and global service and support network. Both businesses share similar beliefs and visions for business operations and customer service where the focus is to produce leading edge products that will save time and money.

Currently, units operating on major mining and tunnelling infrastructure projects within British Columbia. RDO has established RDO Equipment Canada ULC to help service and support Grydale mobile dust collection equipment across Canada.

RDO now has fourteen mobile dust collection units in the USA/Canada fleet. Units include 20,000 CFM to 60,000 CFM international patented track-mounted dust collectors. The tracks allow units to move alongside dust-generating equipment such as roadheaders, trenchers, surface miners, profilers, hydraulic hammers and other excavators to collect dust at the source. The diesel motor powering the centrifugal fan means there is no requirement for an external power supply, plus the compact footprint allows units to be easily transported and operational in a very short period of time with limited set-up requirements.

RDO also has electric-powered skid-mounted units, from 12,000 CFM to 40,000 CFM. These units were originally developed to provide dust control at the source during excavation of cross passages in tunnel construction and can be used within a wide range of applications.

“With dust control regulations being enforced, companies are looking for an effective and immediate dust control solution to keep operations going. Having units in the country available for purchase and rental is key to providing an immediate solution,” said Gregg Herdina, Product Manager, RDO Equipment Co.
